SUSHIL KUMAR

sushil8916@gmail.com 9386408916 Patna

https://www.linkedin.com/in/sushil8916/

Career Objective

To work in a challenging IT environment where I can apply my skills in Python, C#, ASP.NET, Java, MySQL, and Data Science to build efficient software solutions, continuously improve my programming abilities, and contribute to innovative technology projects.

Education

MCA, *University Dept. of Mahematics, Ranchi Univerity, Ranchi* 2014
68.84 Ranchi

B.Sc, *Gossner College (Ranchi University), Ranchi* 2011
78.25 Ranchi

10+2, *DAV Public School, Bariatu Ranchi (NIOS)* 2007
52.0 Ranchi

10, *DAV Public School, BSEB Colony, Patna (CBSE)* 2003
71.2 Patna

Internship / Training

Artificial Intelligence Programming Assistant - By DGT, Microsoft and Edunet Foundation - NSTI W Patna 2025 - 2026 2025 - 2026

Responsibilities / Learning:

- Learned to analyze, visualize, and derive business insights from data using Python, SQL, and BI tools.Python Programming
- Gained strong foundations in computer systems, operating systems, Python programming, and database management.
- Built practical skills in AI, machine learning, deep learning, NLP, and computer vision for real world applications.
- Developed end to end AI solutions using Generative AI, GitHub collaboration, and Streamlit deployment.

Skills

- Basic computer applications (MS Word, Excel, PowerPoint)
- C# Asp net
- M S Office
- Python
- Java
- JavaScript
- UI/UX Design
- Database MySQL, SQL Server
- React
- Angular
- Django Framework
- jQuery
- HTML CSS
- BS5
- Networking

Projects / Practical Work

Mini Project ERP Design for Inventory Record

(https://github.com/Sushilji/ERP_INVENTORY_MANAGEMENT_SYSTEM)

- The ERP system was designed using Python for application development and Microsoft SQL Server as the backend database. The system integrates different organizational activities such as student management, inventory, finance, and reporting into a single centralized platform. The Python backend handles the business logic, user authentication, data processing, and communication with the database. Frameworks such as Django or Flask can be used to create APIs and manage application workflows. The SQL Server database stores structured data in tables such as users, transactions, inventory, and reports. It ensures data integrity, security, and efficient querying using SQL queries, stored procedures, and relational constraints.

Mini Project: - Power BI(Financial Profit & Loss Analytics) Dashboard

- Designed an interactive Power BI dashboard to streamline the analysis of Revenue, Expenses, and Net Profit trends. By leveraging Power Query for data cleaning and DAX for advanced financial modeling, I automated the tracking of year-over-year (YoY) growth and profit margins. This project involved transforming complex financial datasets into intuitive visual reports, enabling stakeholders to quickly identify cost drivers and growth opportunities. It highlights my ability to bridge the gap between raw financial data and strategic business decision-making. Tech Stack: Power BI, DAX, Power Query, Financial Modeling.

Mini Project:-Machine Learning (Stock Market Prediction)

- Developed a machine learning-based stock market prediction system using Python. The project analyzes historical stock data and predicts future price trends using algorithms like Linear Regression and Logistic regression. Utilized libraries such as Pandas, NumPy, and Scikit-learn for data preprocessing, model building, and evaluation.

Mini Project:-Deep Learning (Dog vs Cat Image Classification using CNN)

- Developed an image classification model using Convolutional Neural Networks (CNN) to identify dogs and cats. • Applied data augmentation techniques to improve model performance and reduce overfitting. • Trained and evaluated the model on a structured dataset, achieving ~87% accuracy. Analyzed model performance using training and validation accuracy and loss curves. • Performed predictions on new images and visualized results for both classes.

Mini Project: Data Science (COVID-19 Data Analysis & Data Preprocessing)

- Successfully engineered a data pipeline to clean and transform fragmented global COVID-19 datasets using Python (Pandas). By addressing missing values and structural inconsistencies, I ensured high data integrity for downstream analysis. I developed a series of sophisticated visualizations, including time series line charts and heatmaps via Matplotlib and Seaborn, to uncover hidden trends in infection rates and regional recoveries. This project demonstrates a strong ability to turn raw, messy data into clear, actionable visual stories that drive informed decision-making.

Certifications

Career Essentials in Cybersecurity by Microsoft and LinkedIn
LinkedIn Learning, 2026

Get started with Microsoft 365 Copilot
LinkedIn Learning, 2026

Collaborating with Microsoft Teams
LinkedIn Learning, 2026

Introduction to Cloud Infrastructure: Describe cloud concepts
LinkedIn Learning, 2026

Work smarter in Excel with Copilot Chat
Microsoft Learn, 2026, 2026

GitHub responsible AI
Microsoft Learn, 2026

Achievements

Certificate of Recognition – Top Performer in 1st Mini Project *Microsoft and Edunet foundation* 16.02.2026

Languages

English **Hindi**

Hobbies & Interests

- Reading about new technologies
